(54) Title: A VIDEO RECORDER UNIT AND METHOD OF OPERATION THEREFOR

(57) Abstract: The invention relates to a video recorder unit which has a receiver (211) receiving mixed content video channels (101,103,105) having a mixed content of special content clips (111,117,123,127,129,133,135,139,149) and programs (107,113,119,125,131,137,138,141,145). A detection processor (213) detects the special content clips and an extraction controller (215) extracts the clips and stores them in the memory (217). A group controller (219) groups the special content clips and a play back video generator (225) plays back the group of the special content clips. In this way, the user is presented with a continuous sequence of special content clips extracted from the plurality of mixed content channels whereby a virtual channel of special content clips, such as previews or trailers, is generated.
